                                                                       The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant transcription factor polynuclectides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate germination rate of seeds, vigor of plants and seedlings, or leaf and flower senescence. Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          91:
                                                                                                                                                                  pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note_"Xite_"Year-1021 is a sequence-driven, reracked set
of the original library Gm-cl004 which was prepared from
root cDNA. The mRNA was isolated from entire roots of 8
day old 'Williams' seedlings which were propagated on
paper towels with distilled water. Strateagene's cDNA
Synthesis Kit (catalog #200401) was used to synthesize
the cDNA. The Gm-cl004 library was constructed by Dr.
Paul Keim & Virginia H. Corvell, Department of Biology,
Box5640, Northern Arizona University, Flagstaff, AZ
86011, email: paul.keim@nau.edu, virginia.coryell@nau.edu
The contig analysis to select unique genes was performed
by the laboratory of Ernest Retzel, Computational Biology
Centers, University of Minnesota,

Submitted (25-APR 2002) Maize Mapping Project, University of Missouri, Columbia, MO 65211, USA
If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TICR, www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of t. maize cDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, lows teate, then clones may be requested from ZmDB: www.zmdb.iastate.edu.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Unpublished (2002)

/note="Organ: Base of developing inflorescence (5cm-long);
/note="Organ: Base of developing inflorescence (5cm-long);
vector: pSport1; Site 1: Sal1; Site 2: NotI; An
unidirectional cDNA library generated from (Base of
developing inflorescence (5cm-long)); cDNA was prepared
from polyA+ mRNA using SuperScript Plasmid System Kit
(Invitrogen). The double-strand cDNAs were fractionated
in a sepharose CL-2B 40cm-columns and fragments sizing
between 0.8 and 1.5 Kb were directionally cloned into the
vector. Details of each source of RNA and library
construction can be obtained at

cDNA library was constructed from mRNA isolated from
somatic embryos (age ranging from 2 months to 9 months)
cultured on MSD 20. The library convarient using the
cultured on MSD 20. The library convarient using the
cultured on MSD 20. The library construction
kit. Complementary DNA was synthesized from mRNA using a
poly (dT) sequence with a Not1 restrictions site. Sal1
linkers adapters were ligated to the blunt-ended cDNA
fragments followed by Not1 digestion. The cDNA fragments
were directionally cloned into the Not1-Sal1 restriction
site of the pSPORT1 vector. The ligated cDNA fragments
were transformed into E.coli ElectroMax DH10B host cells.
This library was constructed in the laboratory of Dr. Lila
Vodkin by Anu Khanna at the University of Illinois at
Urbana-Champaign. e-mail: l-vodkin@uiuc.edu"
